On 8/3/09, Plattsmouth Police and Plattsmouth Rescue were dispatched to the Cottonwood Mobile Home Park for a male party having a possible heart attack. As PPD officers were arriving on scene, dispatch advised they were in the process of starting CPR over the phone to the caller. Officers entered the residence and found a male party on the floor unresponsive. Officers immediately attached an AED to the male party as he was not breathing and had no pulse. Officers were able to deliver a shock to the male party right away. Officers began CPR and rescue breathing as there was no pulse. Through out the course of the next few minutes, officers continued CPR but were also able to deliver two additional shocks to the male party.

Plattsmouth Rescue arrived and the male party was loaded into the squad for transport as CPR was continued. Prior to rescue leaving the scene, the male party had regained a pulse. Plattsmouth Rescue transported the male party to Midlands where he was admitted.

This is the first use of the new AED's the police department has received from Plattsmouth Rescue. The newer models allow the same AED pads to be used interchangeably between the police and rescue squad AED's. This minimizes the time it takes to change out machines and maximizes "hands on time" with the patients.
