

## **BELOW FREEZING TEMPS INTO THE WEEKEND**

### **GIVE PIPES A HELPING HAND**

- If pipes run through cabinets or vanities, open the doors to let warmer room temperatures flow in

### **KEEP WATER WORKING**

- Keep water moving through the pipes by allowing a small trickle of water to run. The cost of the extra water is typically lower than the cost of repairing a broken pipe and water damage.

### **IF YOUR PIPES DO FREEZE:**

#### **SHUT OFF THE WATER IMMEDIATELY**

- If pipes run through cabinets or vanities, open the doors to let warmer room temperatures flow in

#### **THAW PIPES WITH WARM AIR**

- You can melt the frozen water in the pipe by warming the air around it with a hairdryer or space heater. Be sure not to leave space heaters unattended and avoid the use of kerosene heaters or open flames.

#### **BE CAREFUL TURNING THE WATER BACK ON**

- Once pipes are thawed, slowly turn the water back on and check the pipes and joints for any cracks or leaks that may have been caused by freezing.
